Innovative ergonomics, direct USB plugand-play connection, high definition and immediate results make the X-VS device with HD technology the most advanced and suitable sensor for your surgery. Simplicity of use and image acquisition - combined with advanced real-time digital technology - improve the quality of work. Impact and dust

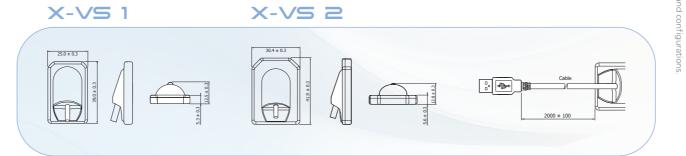

CASTELLINI

resistant, X-VS is IP67 certified (water-resistant) and uses iRYS, the all-in-one software for diagnostics, communication and management of intraoral imaging which ensures smooth storage, processing and printing of images in perfect synergy with any other devices already in the surgery.

PASSION FOR DENTISTRY | Since 1935

CUSTOMISE IMAGES WITH iES - MultiLEVEL

CASTELLINI IES (IMAGE ENHANCEMENT SYSTEM) FILTERS

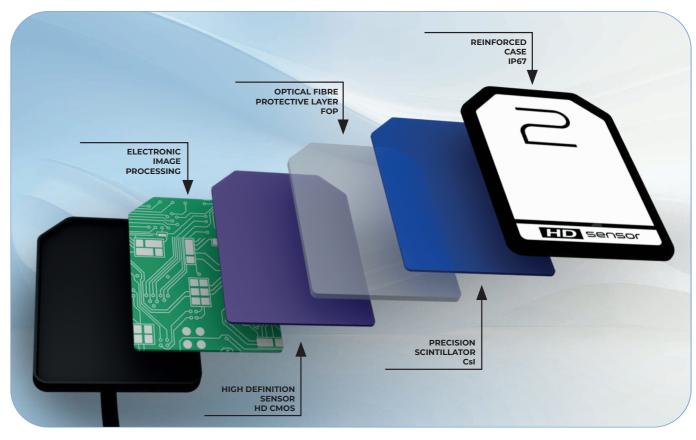

The latest generation of iRYS image processing software aims to improve diagnostic effectiveness. With excellent image resolution and an intuitive software interface, iRYS makes reading intra-oral images easier and more user-friendly. The new Castellini iES (Image Enhancement System) filters are the result of research aimed at meeting the actual needs of dentists. Using proprietary algorithms optimised specifically for the X-VS sensor, a set of Multi Level images (up to 5) can be captured, viewed and shared simultaneously.

Each image is the result of a different improvement action aimed at highlighting various anatomical details with different levels of sharpness. Image contrast can also be customised based on diagnostic or visual preferences, improving test readability.

Preferred settings can then be automated: this creates a comfort zone personalised for each medical professional and for each appointment.

Equipped with the advanced iRYS software, X-VS now offers the versatile MultiLEVEL function, allowing to pre-set the processing filters of images viewable in Multi Level. It is possible to select which filters to use among the pre-set families and define any further customisations, all accessible from the iRYS image viewing window.

LATEST-GENERATION HD SENSOR

4-layer sensor with an additional protective layer to provide sharp, high-contrast images. The Cesium lodide (Csl) scintillator made up of column-like microstructures that preserve image quality first intercepts the X-ray beam and converts it into visible light. The Fibre Optics Plate (a layer of fibre optics) collimates the radiation onto the sensor and protects

it from direct X-ray penetration. The high definition (CMOS HD) acquisition device and on-board electronics convert the light into a digital image with 16,384 grey levels.

MADE-TO-MEASURE SENSOR

X-VS technology allows users to choose between two sensor sizes; these make the sensor even more adaptable to the dimensions of the patient's oral cavity. Outstanding positioning comfort thanks to rounded corners; top performance thanks to compact design and a maximised active area.

4 X-VS Sensor
